Recent results from BES on J/ψ decays and charmonium transitions

Frederick A. Harris

University of Hawaii

Recent results will be reported based on analyses using samples of 58 million J/ψ and 14 million $\psi(2S)$ events collected with the BESII detector at the BEPC, including $J/\psi \to p\bar{p}$, $J/\psi \to \pi^+\pi^- pi^0$, $\psi(2S) \to \gamma\gamma J/\psi$, $\psi(2S) \to X J/\psi$, $\chi_c 0 \to f_0 f_0$, and a pentaquark search.
