Recent results from the KLOE experiment

G. Lanfranchi

Laboratori Nazionali di Frascati, INFN
on behalf of the KLOE Collaboration

Recent results obtained by the KLOE experiment operating at DAΦNE, the Frascati ϕ-factory will be presented. These concern neutral and charged kaon decays including rare K_S decays and semileptonic decays, radiative ϕ decays, upper limits on forbidden η decays and the measurement of the e^+e^- hadronic cross section using initial state radiation. An outline of the perspectives of the experiment will be also given.
