

Recent results on meson spectroscopy from Belle and BaBar

Sadaharu Uehara for Belle and BaBar Collaborations

KEK-IPNS, High Energy Accelerator Research Organization,
1-1 Oho, Tsukuba 305-0801 Japan

Recent experimental studies of meson spectroscopy at the B-factories are reviewed. This talk covers a mass region from light-quark resonances to bottomonia, and includes updates on the exotic candidates of charmoniumlike particles as well as searches and measurements of other new or known states including a charm quark.
