

Physics and recent results from LHCb

G. Passaleva^(a), for the LHCb Collaboration

^(a) Istituto Nazionale di Fisica Nucleare - Florence - ITALY

The LHCb experiment has collected more than 1 fb^{-1} of integrated luminosity in 2010 and 2011 and is producing a large amount of excellent results in beauty and charmed meson physics. An overview of the most recent results on rare B decays, CP violation, and charm physics will be given along with an outlook to the physics perspectives and to the LHCb upgrade.
